

## Short guide for code review volunteers

The goal for the meetup is to help participants to be able to speak aloud what they are thinking. The actual code doesn't matter quite as much. As a code reviewer you would be responsible for:

- Either picking 3 of your own code challenges that fall under the topic for that specific meetup, or being ok with whatever challenges Kimi has picked out
- Asking questions of the participant and encouraging them to speak all their thoughts aloud
- Making sure that not too much time is spent on one volunteer (try to gauge when other participants might be getting bored and then tell the current volunteer that it is time to move on to the next participant so as to give everyone a chance)

When working in the meetup with a volunteer, the following are things that you can do:

- If it hasn't already been mentioned, tell the participants to pretend as though they are teaching you how to do something, even if they aren't sure themselves how to do it.
- Ask what they are thinking every time there is silence.
- If the participant hasn't already voiced what they are going to do before they start doing something, ask them to explain what they are doing and why
- Ask them why they are doing virtually everything
